EDUCATION

Western University, B.Sc. Computer Science

May 2027

GPA: 3.7/4.0

EXPERIENCE

Bree (Y Combinator)

Sept 2026 - Present

Software Engineer Intern

- Orchestrated weekly production CI/CD pipelines and canary deployments utilizing AWS Lambda and API Gateway, routing 40%+ of live traffic through staged rollouts monitored via Datadog to guarantee zero-downtime releases for 100,000+ active users.
- Diagnosed and resolved critical production latency bottlenecks in the TypeScript and Python backend, reducing p99 API response times by 35% while ensuring accurate financial calculations reached end users reliably.
- Streamlined deployment workflows from 5 minutes to under 1 minute, operating as one of two backend engineers on a lean founding team.

RBC Borealis AI (RBC AI Research Lab)

Jan 2026 - Aug 2026

Machine Learning Software Engineer Intern

- Migrated credit-capacity model retraining onto NVIDIA Triton on GPU clusters, working directly with researchers on model architecture changes. Compressed model size 12GB to 170MB (70x) and cut inference time 44%.
- Designed and built the devcontainer system from scratch for every ML researcher on the team, turning a multi-hour manual setup into one-click GPU environment provisioning.
- Architected distributed machine learning training pipelines utilizing PyTorch and RUN:AI to dynamically allocate GPU compute, eliminating infrastructure bottlenecks and accelerating experimentation cycles for the research team.

Intact Insurance

Sept 2025 - Dec 2025

Site Reliability Engineering Intern

- Wrote reusable Terraform modules (networking, permissions, access control) on AWS, letting application teams self-provision compliant infrastructure instead of filing tickets, cutting provisioning time 65%.
- Partnered with a senior security engineer to automate a manual compliance review into a pipeline clustering error patterns across the container fleet, reaching 95% compliance.

Royal Bank of Canada, Amplify (Hedge Fund Research)

May 2025 - Aug 2025

AI Engineer Intern

- Spearheaded a patent-pending agentic research system that automated SEC filing and live news analysis, cutting trader preparation time for client meetings from 6 hours to 2 hours.
- Built the LangChain and FastAPI backend paired with a React/TypeScript frontend, deploying the Dockerized system on OpenShift (OCP) after translating ambiguous stakeholder requirements into a validated technical spec.

Royal Bank of Canada, Capital Markets

May 2024 - Aug 2024

Software Engineer Intern

- Built a component library of 30+ reusable React/TypeScript components from scratch, now used daily by 100+ traders across multiple business lines, cutting page load times.
- Built a ranking service (regression model, Snowflake + ClickHouse), served via FastAPI to 3 trading desks; reached 95%+ accuracy on signal-to-movement ratio for high-impact news days.

PROJECTS

CacheLane | Node.js, TypeScript, SQLite | github.com/Aditya-Tripuraneni/CacheLane

- Co-designed a tiered, fail-open caching system preventing API budget drain in coding-agent sessions. Integrated colleague feedback on edge cases; reached 3,000+ npm downloads and daily team adoption.

Rosetta | Node.js, TypeScript | github.com/RajanChavada/Rosetta

- Built a CLI translating agentic coding configs across 9 IDEs (Cursor, Claude Code, Windsurf). Pitched at Borealis AI, now used by other engineers on the team.

Neurovn | React, TypeScript, Node.js | github.com/RajanChavada/Neurovn

- Visual editor estimating agentic workflow cost and latency before a single API call runs, using graph algorithms. Sole founder; drew inbound interest from Google Cloud engineers.

OPEN SOURCE CONTRIBUTIONS

crawl4ai | Python, 73k stars | github.com/unclecode/crawl4ai/pull/2042

- Removed an unreachable duplicate file and two dead functions, eliminating 1,900+ lines of abandoned code. Reviewed and merged by the lead maintainer.

Opik | Python | github.com/comet-ml/opik/pull/7339

- Fixed Bedrock model pricing lookups failing for version-pinned model names; added a regex fallback mirroring an existing codebase pattern. Merged.

Haystack | Python, 26k stars | github.com/deepset-ai/haystack/pull/11866

- Fixed four passing test cases silently colliding on the same pytest ID, making failures untraceable. Merged.

Langfuse / CAMEL-AI | TypeScript / Python | github.com/langfuse/langfuse · github.com/camel-ai/camel

- Removed retired feature-preview plumbing (Langfuse); fixed unhandled Anthropic rate-limit errors crashing the ChatAgent retry loop (CAMEL-AI).

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, React, Next.js, React Native, SwiftUI, Tailwind, YAML, HCL/Terraform

Backend & Data: Trino/Starburst, LangChain, PostgreSQL, AWS S3, REST APIs, GraphQL, Apache Kafka

Cloud & Infra: AWS, GCP, Docker, Kubernetes, OCP 4, Terraform, GitHub Actions, CI/CD

Observability & Tooling: PyTorch, TensorFlow, NVIDIA Triton, Prometheus, Grafana, Datadog, Elasticsearch, Kibana, Snyk, RUN:AI
